Another Way to Use the Wheat Surplus

At New Potosi, Idaho, coal costs \$15.50 a ton and wood \$10 a cord, but wheat is worth only \$2 a ton delivered, so citizens are using it for fuel.

It gives more heat for the money than anything else, when the proper grate is used.

Only A Few Ideas

Twenty years ago I heard a famous editor deliver a talk on advertising before the Chicago advertising club. I was just out of college and had seen very few great men, so the talk made a deep impression.

I remember the editor said that "reputation is reputation," and he told a number of stories to illustrate the point.

The other night in New York I heard the same great editor speak on the same subject. To my surprise it was the very same speech.

Another speaker was a celebrated banker whom I had heard of on previous occasions. He, also, repeated himself. As we left the dining room one of my friends, who had noted the repetitions remarked on them gloomily.

Rather discouraging to see that even the big minds have so little in them," he said.

"Makes you wonder if human ingenuity is coming to an end."

"They say that though the stars appear so numberless, you can not count more than a thousand," he said.

"Well, there are few thoughts. Count the books and you would think that there was immense wealth; but any expert knows that there are few thoughts which have emerged in his time. Shut him in a closet and he could soon tell them all. They are quoted, contradicted, modified, but the amount remains computably small."

It is a good thing for humanity that this is so. Nature apparently designed the game of human progress to last a long time, and provided that only a small advance should be made in any one generation.

Suppose one mind should suddenly discover everything. How it would take the rest out of the game!

Moreover, it is decidedly heartening to us average folks to know that only a very little difference separates us from the smartest Lincoln remarked on it. "I have talked with great men," he said, "and I can not see wherein they differ from others."

Generally speaking, the great achieve their greatness by industry rather than by money.
